Mipro Wireless Microphone

**Wireless Microphones and Transmitters**

Most classrooms with Mipro receivers also have a lavalier microphone and transmitter beltpack available in the room. These mics should already be matched to the appropriate channel in their specific room, and should be ready for use. However, 2 AA batteries are required, and are not supplied. It is suggested that anyone planning on using the microphone provided bring 2 good AA batteries for their personal use.

**ACT**

Press and hold this button to set the receiver to match the transmitter frequency to this receiver.

Hold the transmitter, with the "ACT" label facing the transmitter, approximately 5"-10" away.

When the mic is matched, the receiver "Channel" number will stop flashing, and the "RF" lights will illuminate.

**SCAN / SET**

Please do not use these buttons! These buttons change the channel on the receiver only. The current channels have been preset by ASC, with the hope of preventing signals crossing, and to keep matched mics matched longterm. There should be a note on the receiver to indicate the appropriate channel for the room. If this channel gets changed, please contact Classroom Technology Services at 573-882-6703.
